

HEIDI KELLER is a Professor emeritus of Psychology at the University of Osnabrück and a director of Nevet, the Greenhouse of Context-Informed Research and Training for Children in Need at the Paul Baerwald School of Social Work and Social Welfare at the Hebrew University of Jerusalem. Her interests concern the interrelationship between culture and biology for the understanding of human development. She has done extensive (longitudinal) research in diverse cultural contexts across the globe and taught at different universities in different countries. She received several awards, among them the award for career achievement from the German Society of Psychology in 2014. She is interested in the application of basic science for application in the counselling/clinical as well as educational fields, especially with respect to the implementation of culture sensitive approaches. She is currently mainly concentrating on the development of culture sensitive approaches to attachment and their implementation in practice.
